

A photograph of two hornbills on the ground. One is an adult with a large, curved, yellowish-brown bill and a grey body with black and white mottled patterns on its wings. The other is a smaller, younger bird with similar features. They are standing on dry, brownish ground with some sparse green grass. A tree trunk is visible on the right side of the frame.

All calls and photos on this CD taken December 2002 - January 2003 in  
Namibia, Botswana and South Africa by Daniel M. Brooks, Ph.D.,  
HMNS Curator of Vertebrate Zoology. Produced by Houston Computing.  
© 2004 - Houston Museum of Natural Science.

Thanks to the Texas Bioacoustics Lab, Texas A&M University - Corpus  
Christi, for archiving these recordings.

A photograph of a hornbill perched on a tree branch. The bird has a large, curved, yellowish-brown bill and a grey body with black and white mottled patterns on its wings. It is looking towards the left. The background shows a dense network of tree branches and leaves.
